

Policy on Sustainability and Environment

Varioline Intercool Pakistan (Pvt) Ltd.

Policy on sustainability and environment is based on the areas of continuous improvement, prevention and reduction of environmental hazards and compliance to all the legal obligations. Over the years Varioline has shown total commitment through the continuous development in our products and services while contributing our part in the development of society, people and environment.

VARIOLINE
INTERCOOL'S
COMMITMENT

Continuous product development by the R&D department by incorporating latest technologies for the reduction of energy consumption and number of the components used in manufacturing process. We also ensure the usage of environmental friendly parts, refrigerant gases and blowing agents.

VARIOLINE
INTERCOOL'S
COMMITMENT

Implement leading industrial manufacturing practices in the regular production process. Ensure proper trainings to our employees to guarantee a conducive and learning environment is available to all the employees, which would lead to reduction in on-line wastages.

VARIOLINE
INTERCOOL'S
COMMITMENT

Maintain relationship with all the suppliers to make sure that the good quality of raw material is available to meet the international standards. Vendor sourcing and development is also critical for the sustainability of the supply chain process. We are constantly upgrading our suppliers to meet international standards & use of raw materials that are recyclable and come from sustainable sources.

VARIOLINE
INTERCOOL'S
COMMITMENT

We believe in community development by hiring local residents and investment in local community projects for betterment of basic health and education facilities.

VARIOLINE
INTERCOOL'S
COMMITMENT

Implement integrated management system to ensure compliance to our HSE policy and commitment. Following which we have already achieved the milestones of:

ISO 9001:2008, ISO 14001:2004, OHSAS 18001:2007, ISO 22000:2005 and SA 8000-2008.

VARIOLINE INTERCOOL'S COMMITMENT

Environmental sustainability is also incorporated in our manufacturing process such as:

Energy Consumption:

Energy conservation is a part of our product development strategy. We ensure that our products have descending energy consumption each year with enhanced cooling performance.

Waste Reduction :

A precise process flow helps us to maintain minimum wastage of raw material. Moreover, water waste is disposed-off after necessary treatment with minimum damage to the environment.

Noise Emission :

We implement a continual improvement process in the design and specification of our product to reduce noise emissions.

Carbon Emission Reduction:

constant reduction in the carbon substances used in our manufacturing process by developing our local and foreign vendors and creating awareness about low carbon emission products.
